

# IS IT THE NETWORK, OR THE APPLICATION?

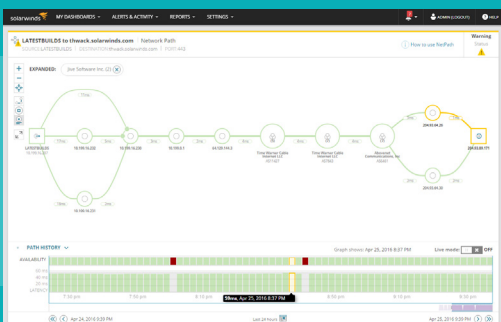

Users in different locations of an organization (main office & branch office) are reporting slow performance of intranet sites. What is causing the problem and why? Is it the network, the applications, or the infrastructure that needs troubleshooting, or a combination?

## Solve Network, Application & Server Problems with SolarWinds

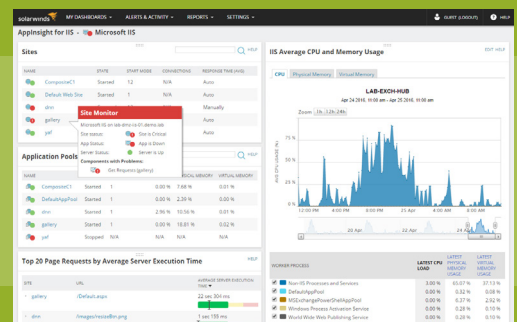

### Network Performance Monitor (NPM)

- Monitor availability, fault and performance of your multi-vendor network environment.
- Perform dynamic discovery and mapping of wired and wireless networks.
- Use automated capacity forecasting, and intelligent alerting and reporting.
- **NetPath™ Services dashboard:** Troubleshoot performance issues faster using hop-by-hop critical path analysis across on-premises, hybrid and cloud networks.

### Server & Application Monitor (SAM)

- Use out-of-the-box templates to monitor hundreds of enterprise applications including IIS™, Exchange™, Active Directory®, Oracle®, Java®, Citrix®, and more.
- Monitor server performance, resource utilization, hardware health and asset inventory.
- **AppStack™ dashboard:** Visualize application dependencies with underlying physical and virtual infrastructure for faster root cause analysis.

The **Quality of Experience (QoE) dashboard** available in and common to both NPM and SAM analyzes network packets to provide insight into network and application response times for specific application traffic.

## Benefits of Using NPM & SAM Together

One unified web interface and NOC for monitoring and troubleshooting networks and applications infrastructure.

Eliminate finger-pointing between network and system teams. Find out exactly where the root cause is for faster troubleshooting.

NPM and SAM are built on the Orion® Platform sharing common services such as centralized alerting, reporting and management.

Easy to install, set up and use. Automatically discover your environment and start monitoring in no time. No professional services required.

*“The single pane of glass view with SolarWinds NPM and SAM gives you a better overall health view of your environment.”*

Jim Morrison,  
IT Professional,  
Dassault Systèmes
